

CARE GUIDE

GENERAL INFORMATION

- Do not use any corrosive chemicals when cleaning your shoes
- Do not machine wash or tumble dry
- Extract your inlay soles from your shoes after use, in order to enable the shoes and inlay soles to emit any moisture and dry out until next use
- Remove laces before cleaning/brushing any dirt from your shoes
- Clean with tepid water, if needed unscented liquid detergent can also be applied when cleaning your shoes
- Do not use bleach
- Dry in normal conditions, don't use radiators, drying cabinets etc
- Don't store your shoes in warm, humid or poorly ventilated areas since it can cause mold

FULL GRAIN LEATHER

- Leather cream, spray, wax or non-oiled based wax can be applied to reduce the possibility of the leather drying out, however it's recommended to start applying on a less visible part of the shoes to avoid discoloration
- Make sure that the shoes are thoroughly cleaned on all surfaces that will be treated with cream, spray or polish, before applying it on the shoes
- Clear off any remaining leather treatment, then once again leave your shoes to dry
- Leather cream, spray, polish or non-oiled based wax can be applied several times during the life-span of the product, when the leather starts looking a bit dry it can be time to treat them once again
